Wendell Adriel
Software Engineer & Architect

About

I'm a Brazilian/Portuguese Software Engineer who loves Software Architecture and Software Design. I started to work with software development in 2009.

I already worked on many projects with different technologies but I prefer to work on backend solutions. I can work with PHP, Go, Node.js, Python and Java. I can also work with frontend technologies, I have good knowledge of JavaScript and UI frameworks and libraries.

I have experience designing and building the architecture for solutions from scratch and leading teams of engineers and projects of different sizes and complexity.

I love to share what I know with others, I have experience mentoring others and creating technical and non-technical documentation. I also maintain and contribute to some open-source projects.
